**Subject:** Dust problem along Marine Drive

To all concerned,

While we would like to be good citizens and not complain without just provocation the situation at our facility in Blaine Harbor is becoming unbearable.

We are trying to grow our business in this City and in particular through the sale of new and brokerage boats at our Marine Drive facility.

We know that there was bound to be some inconvenience from the current construction project but we feel that this was very poorly planned and the expense we are incurring could have been mitigated. Why did they feel they had to tear up the road in the first one or two blocks when the actual construction, at least to date has been well down the road. With a little common sense they could have left the removal of the old blacktop until they were ready to work in that area and re-pave it as quickly as possible.

I have had to hire an extra person just to try and keep our boats presentable and we are fighting a losing battle. Our store is a dust bowl and needs constant dusting and vacuuming. Is the City prepared to compensate us for these legitimate expenses we are incurring?

Your early reply would be appreciated,

Bob Brooks

**Subject:** Marine Drive Reconstruction & Wastewater Equalization Tank Construction Project - Citizen Complaint

**FOR JEFF:**

As the Design Project Manager for subject project, which is the cause of Mr Brooks' complaints in his email below, please provide to me soonest your suggested response to him on behalf of Steve Banham, who would normally respond in a timely manner, but can't since he is on vacation from today until August 4th. Specifically, please recite the Contractor's current dust suppression and activity sequencing obligations. In view of the complaint, should we revise any of these obligations? If yes, what do you believe the contractual financial and time schedule consequences might be? What are your thoughts regarding his compensation remark?

**FOR SCOTT:**

As the Construction Project Manager for subject project, is the Contractor complying with current dust suppression and mandatory (if any) activity sequencing requirements?

Regards,  
Sandy
